How Software App Integrations Work

If you own or work at a small business, you know that a lot of effort goes into running a company. Luckily, many different tools, like software app integrations, are available to help with business operations.

However, with so many different tools available, it's easy to fall into the trap of storing business data within several different software packages – with no ability to sync information between them.

This would require you to manually export, import and update data on a regular basis across apps and tools. You can avoid the headache of this constant chore with software app integrations, so let's talk about them:

What Is Software Integration?

When two software solutions are able to integrate, it means their systems are compatible and can be linked to each other. This allows systems to “talk” to one another and work in unison.

Most integrations allow users to share data and files across those linked applications. No need to manually import data from another application or program – integrations allow data sharing with no additional effort or input from you.

Why Software App Integrations?

When it comes down to it, no one piece of software can satisfy every single need of a business. Plus, the needs of users and companies vary and change over time.

The option to integrate multiple apps allows users to create the unique experience that will help them and their business the most, while minimizing unnecessary or repeated work.

Once you identify software that will help your business, be sure to ask about any available third-party software integrations. Tools that can work in tandem with your software to help make your day-to-day operations easier.

FieldEdge Integrations

From [accounting](#) to customer review management to [marketing automation](#), there are many [software partners](#) that can further enhance your FieldEdge experience.

These app integrations can assist with every area of your business via:

- Automatically updating and [adding data](#) into FieldEdge
- Giving you more visibility into your business [at-a-glance](#)
- Providing peace of mind that the data you see is the [most current](#)
- Accessing [customer profile](#) data in FieldEdge for marketing automation
- Saving your [bookkeeping](#) team from the dreaded double-entry headache
