When you think about renovations, solar panels might not top your list of thrilling home additions. A man cave or en suite bathroom might trump incremental monthly energy savings or a commitment to clean energy. But the benefits of independent solar energy production are growing. Many homeowners have already taken the plunge on rooftop PV solar panels. So how do you decide if solar panels are right for your home?

The Benefits

- **Price & Efficiency**

We are witnessing a tremendous increase in solar panel energy conversion efficiency while also a drastic decrease in cost to the end user. The advancements seem to continue to roll out each week. With advanced materials, like perovskite (<http://bit.ly/1Phw2zh>) now used in some solar panels, adding to the energy conversion percentage to widespread adoption spurring an increase in panel production, now may be the time to jump on the solar panel train for your home.

- **Subsidies**

It seems 2015 is the banner year when governments across the globe are recognizing the benefits of independent solar energy generation for all the world's citizens. Federal and state government agencies are offering helpful incentives to those wishing to adopt a clean energy lifestyle. These subsidies vary from state to state and country to country, but you may find that going solar might cost less than you ever dreamed!

- **Leasing Options**

With the rise of leasing solar panels, companies like Solar City are offering a less expensive entry into the world of independent solar energy generation. If an initial down payment is all that's stopping you from considering the benefits of clean energy, consider finding out what all of your leasing options are. You might be surprised exactly how much a solar leasing company is able to work with you.

- **Increase to Home Value**

You don't want to be the last house on the block still burning those nasty fossil fuels. Independent solar power generation is sweeping the suburbs, and with that an increase to value of homes with solar panels is likely. Some have seen their home values jump by as much as (<http://nyti.ms/1EOxaqq>) 3% when selling their homes with solar panels installed.

Do you rent or own?

There's a slim chance that you will be allowed to install solar panels on your rented property. This doesn't mean it is impossible. If you are truly motivated consider discussing the potential of rooftop PV solar panels with your landlord. These days more and more people are warming to the idea of independent energy generation, so it may not be as hard a sell as you might think.

If you own your own home, you obviously have the final say on the matter, but that doesn't mean you're a perfect fit for rooftop PV solar panels. Does your home face west? South? Do you have large trees providing shade on the roof of your residence? Even geographic location can factor in to the effectiveness of rooftop PV solar panels.

Contact Us

If you're still wondering if you'll be a good fit for rooftop PV solar panels, consider giving us a call. We can connect you with an installer who will visit your residence and assess whether or not your home is a good candidate for solar panels. Truly the biggest hurdle in all of this is deciding if you want to make the plunge into independent energy generation and a monthly savings on your energy bill.

Availability of any state, federal, or local programs will vary and are subject to change. Consult with a financial professional before making any decisions. Energy and financial savings are not guaranteed and will vary from customer to customer.
