Tesla Powerwall: One Week In

CHAZ WILKE ([HTTPS://SOLARHOME.COM/AUTHOR/CHAZW/](https://solarhome.com/author/chazw/)) / MAY 11, 2015 ([HTTPS://SOLARHOME.COM/TESLA-POWERWALL-ONE-WEEK-IN/](https://solarhome.com/tesla-powerwall-one-week-in/)) / [LEAVE A COMMENT](#) ([HTTPS://SOLARHOME.COM/TESLA-POWERWALL-ONE-WEEK-IN/#RESPOND](https://solarhome.com/tesla-powerwall-one-week-in/#respond))

It's been one week since Elon Musk announced Tesla Energy's bold plan for the future of solar generated power. Even in this short amount of time, the groundswell of support has been, as Musk puts it, "just nutty (<http://bit.ly/1PCbHUo>)."

If you are unfamiliar, Tesla Energy is a new branch of Tesla Motors that is focusing on battery-based solar power storage. The hopes are to help those with solar panels wean themselves off the grid. It will help the utility companies with the increasing number of customers feeding-in electricity to the grid for a fee, and also help emerging markets without a power line infrastructure. A larger utility-grade Power Pack was also unveiled, but the price and capacity of that option is out of reach for the average consumer and is targeting utilities and commercial companies.

The Powerwall is targeted specifically at the homeowner with solar panels already installed. Homeowners can choose from a 7kWh version priced at \$3,000 and a 10kWh version that costs \$3,500. Both versions are capable of daisy-chaining together nine total Powerwalls (<http://bit.ly/1zVUyU4>). This gives the average homeowner more than enough energy for the hours when the sun isn't shining or when it's cloudy.

If this is the first you're hearing about this and you think you might want one, you may be in for some sobering news. In the first week alone, Tesla Energy received 38,000 reservations (<http://bit.ly/1EtC1uT>) and is now potentially sold out (<http://bit.ly/1PCbHUo>) for the next 12 months. "I mean, there's like no way that we could possibly satisfy this demand this year. And we're basically, like, sold out through the middle of next year... in the first week. It's crazy," Musk said on a recent conference call.

And consumer demand is just one portion of Tesla Energy's immediate and resounding success. Multiple companies have signed partnership deals. "Cargill and Pacific Gas & Electric (PG&E) will be installing a 1 MWh (megawatt-hour) Tesla battery system at Cargill's Fresno, California, beef processing facility," reports (<http://bit.ly/1E2dawE>) Clean Technica. Edison Energy, Sunrun, LichtBlick, and Elon's brother's company Solar City also have signed deals with the new division of Tesla Motors.

Sunrun, the self-professed "largest dedicated residential solar company (<http://prn.to/1Pe4TS0>) in the U.S." signed a deal with Tesla Energy and will now offer Tesla Powerwalls to its customers. "We believe the next evolution of solar as a service is home solar paired with storage and we look forward to adding Tesla (<http://bit.ly/1EwThhQ>) and its new energy storage for consumers to our extensive line of battery offerings," said Paul Winnowski, Sunrun's chief operating officer.

German energy and IT company LichtBlick entered into collaboration with Tesla Energy to provide its customers in Germany with Tesla's Powerwall. "The new Tesla Powerwall represents a milestone, since powerful, affordable batteries are a key technology in the distributed energy revolution," reads a press release (<http://bit.ly/1J5UIKy>) from LichtBlick founder and CEO Heiko von Tschischwitz.

For those inside Tesla Energy, the response has been overwhelmingly positive, but also just overwhelming. Tesla CEO Elon Musk can't believe the response from his unveiling just one week ago. "We have to triage our responses to those who want to be a distributor," Musk said (<http://bit.ly/1PCbHUo>). "It seems to have gone super viral."
